Max O. Peer review of BrendenFerkans project

Quality of Work: 2.5/3 – The reason I gave the quality of work a 2.5 out of 3 is because it didn't have any code but, the readme file was very well thought out and had a good overview of what the project is about. You could try and add some rough code to the readme file so that we could see the structure of what you will be working on but every thing still looks good.

Intellectual Merit: 3/3 – So I think that this is a really cool project because it is very applicable to what a computer scientist may be doing in the work world. I like the idea of having the pictures show instead of the file name. It would make life a lot easier for those who have tons of pictures. This seems like a cool project and am excited for what you guys come up with.

Video: 3/3 – The video does a good job explaining the project and gives the viewer a good idea on what/how the system will function. Maybe just add a section on what react is?? Other wise the video was good.
